

# EXTREME DINOSAUR NIGERSAURUS

## **Nigersaurus, Extreme Dinosaur**

*Nigersaurus* is a 30-foot-long plant-eating dinosaur that lived 110 million years ago in what is now Niger's Sahara Desert. It was discovered by an expedition lead by Dr. Paul Sereno. *Nigersaurus* lived in a lush environment alongside the predatory dinosaur *Suchomimus*, the plant eaters *Ouranosaurus* and *Lurdusaurus*, and SuperCroc, a 40-foot-long crocodile. *Nigersaurus* had a delicate skull and an extremely wide mouth lined with teeth especially adapted for browsing plants close to the ground.
